## DETAILED ACTION

### *Specification*

1. The disclosure is objected to because of the following informalities:

On page 3, at line 10 the word "acid" is misspelled.

Appropriate correction is required.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 1621

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1 - 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koike et al. (U.S. 7,056,949) in view of Cain et al. (U.S. 6,184,009).

The rejected claims, cover inter alia, an oil composition comprising 40-95% by weight of diglycerides, 5-60% by weight of triglycerides, 0.1-10% by weight of monoglycerides, and 0.02-10% by weight of residues, in which the ratio of conjugated linoleic acid (CLA) to fatty acids contained in the total glycerides is 5-98%. Further, the conjugated linoleic acid comprises at least one selected from the group consisting of cis-9, trans-11 CLA, trans-10, cis-12 CLA, and other CLA isomers.

Koike et al. discloses oil/fat composition 4 in Table 1 of column 8 that includes a triglyceride, diglyceride, monoglyceride and linoleic acid and other fatty acids. The weight percentage ranges overlap those of the rejected claims and can be used in foods.

The reference fails to explicitly teach that the linoleic acid is a conjugated linoleic acid (CLA) of a specific isomeric structure. However, Cain et al. teaches a process for preparing a glyceride material containing conjugated linoleic acid of two different isomer types, i.e. cis-9, trans-11. (see column 2, lines 1-55 & Experiment 7, Table 1a).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to have a oil composition, which is a blend of triglyceride, diglyceride, monoglyceride and linoleic acid and other fatty acids, as suggested by Koike et al. and include various isomers of the CLA as suggested by

Cain, and produce the instant invention. Therefore, the invention as a whole was *prima facie* obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references since the references teach or suggest the elements of the rejected claims, especially in the absence of evidence to the contrary.
